Software-as-a-Service (SaaS)

More often than not these days, businesses are moving away from purchasing and managing software in house to a Software-as-a-Service (SaaS) model. The end-user is looking for pay-as-you-go SaaS solutions because it's less costly, but also because they're spared the hassle of needing to purchase upgrades, patches or other updates and the technical know-how needed to implement them. The SaaS model provides both opportunities and challenges, but Opus Interactive is here to help make this process smooth and pain free from concept to hosting.

Getting Started with SaaS – The Migration

If you're a software developer and you've got an application that's ready for consumer consumption, we can help you migrate it to a SaaS environment. We have experience in creating SaaS applications without lengthy reprogramming, so you're up and running quickly. We'll take care of needed SaaS additions, including:

- Automatic provisioning
- Pricing and invoicing
- Subscriber management
- Web functionality
- QA testing

The SaaS Infrastructure

Opus Interactive will assess your user market and determine the most appropriate hosting architecture to ensure that access and functionality are not compromised. Our engineers understand that the hosting environment must be constantly available and capable of scaling quickly, and will perform scenario tests to ensure that it can handle what's thrown at it BEFORE it goes live.

We'll monitor your applications to ensure they're functioning correctly, so you can focus on the rest of your business needs, and with an industry leading SLA you'll have peace of mind.

Infrastructure-as-a-Service (IaaS)

Looking to completely outsource your current IT infrastructure? Opus Interactive's Infrastructure-as-a-Service (IaaS) solution may be the perfect fit. We'll provision all the equipment you'll need to outsource your IT operations, including storage, hardware, servers, desktops, collaboration platforms and networking components.

Do you run an online business? We can also help you establish and manage ecommerce solutions and online applications. Our certified engineers are responsible for housing, running, and maintaining all equipment; you just pay for the resources you use. IaaS allows you to outsource as much of your IT requirements as you'd like. It's like having Opus Interactive right down the hall, as your IT department, giving you the ability to focus on your business core competencies.

- No need for hardware investment – or depreciation – concerns
- Dynamic scaling
- Desktop and server virtualization
- Eliminate costly overhead
- Utility-based computing and billing
- Automate time-consuming administrative tasks

Contact us today to learn more about IaaS and whether it's right for your business. We'll provide you with a complementary analysis and customized solution estimate.
