

//Data Backup & Recovery

Data is the life blood of most companies these days and to ensure business continuity, it must be protected and backed up for protection against disaster – natural or not. Opus Interactive understands this. We offer several managed backup services for your disaster recovery and back up needs.

When you partner with Opus Interactive to ensure business continuity, your IT and network staff have more time to support your employees – and focus on achieving strategic objectives. Explore our backup and recovery solutions and contact us with questions.

CONTINUOUS DATA PROTECTION®

Opus Interactive utilizes R1Soft CDP Solution for Continuous Data Protection. R1Soft is a server software application that enables disk-based data protection and disaster recovery for Linux and Microsoft servers. CDP Server protects disk volume data using synchronization over the network by storing point-in-time snapshots in disk-based storage.

R1Soft's Continuous Data Protection® solution is a near-continuous backup system capable of providing hundreds of recovery points per day – scheduled as little as 5 or 10 minutes apart. CDP Server works by reading your hard disk volumes at the sector level, bypassing the file system for the ultimate in performance and recovery. This disk sector synchronization is performed while the server is online and provides no interruption to other I/O requests even on a busy server.

By reading the disk at the lowest possible level, the point-in-time recovery images will contain your files and all formatting, partition tables, and volume configuration needed for complete and instant disaster recovery. In other words, the data you have is the data you can restore.

Contact us today to learn more about Data Backup and Recovery and whether it's right for your business.

It's people who design, produce, use, support,
fix, upgrade and optimize technology.
And, without going into an IT telephony
conversation we are all about both.

Opus Interactive is dedicated to not only
providing the best technology and expertise,
but flexibility and individuality developing
customized solutions that serve the unique
personalities and needs of each client.

Technology, meet humanity.

//Data Backup & Recovery

Opus Interactive can provide you with several Virtual Dedicated Server (VDS) options that provide built-in backup and recovery solutions. Partitioned off of our virtual computing environment, our VDS family is built with the leading hosting technologies, including VMware, HP Blade Servers, and LeftHand Networks clustered storage.

VDS²

Takes the base VDS to the next level by offering live migration technology.

This high availability (HA) addition eliminates the hassles of maintenance windows and provides peace of mind with no server downtimes; a great deal starting at just \$60 per month.

VDS³

Builds off of VDS² by providing an active/passive virtualization platform where the main server, set of servers, or the entire cluster is active and another set of servers exists in another location ready to take over the load in case of failure. The original servers can be rapidly migrated to a different physical location in the event of failure to minimize downtime. This solution includes site-to-site connectivity for data replication and migration as well as inter-site communication.

VDS⁴

Continuing the evolution of our VDS offerings, VDS creates the ultimate in redundancy with an active/active virtualization solution where the server, servers, or entire private cloud is replicated to two or more physical locations. Traffic is globally load balanced and spread across multiple solutions at the same time. Any failures would result in the redirection of traffic to an already active location that would handle the load until the failed site comes back online. This solution includes site-to-site connectivity for data replication and inter-site communication. Call us today for custom pricing.

*Excludes maintenance windows

About Opus Interactive

Portland, Oregon based Opus Interactive is a full-service Managed Services Provider (MSP). Founded in 1994, the company provides managed hosting, dedicated virtual and standard servers, colocation, and hi-capacity Internet services. With its unique high-density data center model, advanced technology adoption, clean power utilization, and energy efficient hosting solutions, Opus Interactive works with organizations of all sizes helping them reduce IT infrastructure costs and consolidate their server footprint. They team with industry leading partners such as VMware, HP, Cisco and Microsoft. Opus Interactive is an accredited member of the International Managed Services Provider Alliance.
