

Ransomware-Resistant. Fully Managed Backup.

BUSINESS ADVANTAGES

- Predictable cost – Significantly reduces costs and increases productivity by eliminating expenses associated with a second data center – hardware, space, power, and staff
- Reduce complexity – Eliminate the manual coordination of hardware and virtualization activities with centralized management
- Improve service levels – Tailored recovery point objectives (RPO) of seconds and recovery time objectives (RTO) of minutes
- Easily scale and mobilize applications to meet changing business and technical requirements
- Simplify off-site backup – Built-in ability to mirror primary NAS backup contents to other backup repositories with the same or different retention policy with 100% bulletproof protection from ransomware and insider threat with immutable backups

Safeguard your critical data and ensure unbreakable business continuity with Opus Interactive's fully managed Veeam Backup services. Powered by Veeam Backup & Replication and delivered from our resilient Tier III+ data centers in Oregon, Texas, and Northern Virginia, we provide tailored protection for virtual, physical, cloud, and hybrid workloads—complete with instant recovery, immutable backups, and ransomware resilience.

Recovery Options to Match Your Risk Tolerance

Choose the right level of service for your mission-critical applications:

- Standard – Weeks to restore for cost-effective archival and secondary data.
- Enhanced – Minutes to restore with fast replication and failover.
- Premium – Seconds to restore or real-time active/active, geographically load-balanced solutions across multiple data centers for zero-downtime operations.

*Solutions built for performance,
backed by SLAs*

Solutions are fully customizable to meet your RTO/RPO needs, compliance needs (HIPAA, PCI-DSS, ISO 27001, SOC 2), and budget.

Strengthen Continuity with the Modern 3-2-1 Backup Strategy

Reliable backup is the foundation of true availability. When disruptions occur, minimizing data loss is key to rapid recovery and reduced business impact. Opus enhances the classic 3-2-1 rule with Veeam's advanced features:

- 3 copies of your data (production + two backups) for redundancy.
- 2 different media types (e.g., local disk + secure cloud repository) to avoid single-point failures.
- 1 off-site copy (in our geographically diverse, compliant data centers) for disaster protection.

We go further with immutable storage (S3 Object Lock), air-gapped options, and automated verification—delivering ransomware-proof, auditable backups that ensure clean, fast restores every time.

Our datacenter site selection criteria ensures performance, security, and resilience – Tier III+ data centers delivering 100% uptime, direct public cloud onramps, diverse fiber routes, and geographic and regional redundancy. Deep compliance, three separate energy grids and three regions ensure maximum data protection.

Key Benefits

- Fully managed by Opus experts—24/7 monitoring, management, and support.
- Up to 40% savings on backup operations through efficient Veeam Cloud Connect integration.
- Seamless compatibility with existing Veeam setups or full implementation.
- High-compliance environment and regional redundancy for ultimate resilience.

Protect your enterprise with Opus-managed Veeam: unbreakable protection, instant recovery, and peace of mind.

WHITE GLOVE SUPPORT

- 100% uptime guarantees
- Opus Interactive Infrastructure, Datacenter, and Network SLA
- 15-Minute Response Time
- 24/7/365 phone and live access to engineer support
- NPS 9.42
- 95.6% CSAT

ABOUT OPUS INTERACTIVE

Since 1996, Opus Interactive has provided tailored cloud, colocation, and AI-ready infrastructure solutions that help customers control costs and optimize resources from secure Tier III+ data centers in Oregon, Texas, and Northern Virginia.

With over 29 years of reliability, our solutions consistently meet strict compliance standards, including PCI-DSS, HIPAA, ISO 27001, and SSAE 18 Type II SOC 2, ensuring secure and auditable operations for enterprises.
